

**For a GREEN today & tomorrow: Environmentally safe, biodegradable oil & fuel spill cleanup remediation products.**

**Petroleum Remediation Product (PRP)** powder is excellent for oil spill cleanup for moderate to small oil spills in areas such as shops, industrial plants, stormwater runoff, storage tanks, shorelines and waterways, marinas, railroad tracks, oil wells & oil fields, maintenance facilities, truck roll-overs, marshes & wetlands or any location where oil, diesel fuel, gasoline, liquid petroleum or other hydrocarbon remediation is required. The bioremediation properties of PRP will biodegrade oil spills to mitigate the collateral damage to the ecosystem caused by accidental discharge of hydrocarbon products into the environment.

PRP consists of tiny spheres of treated wax, which contain nutrients. When a wax sphere comes in contact with spilled oil, it "binds" with the hydrocarbons. Nutrients in the sphere help microorganisms from the immediate environment flourish until they eat every droplet of oil. PRP will absorb and remediate, over time, more than 20 times its weight. This natural, biodegradable oil spill powder can be used on any hydrocarbon spill application.

**Oil Buster** is a combination of PRP and a proprietary blend of ground corncob or soy and can be used to absorb and remediate oil, fuel and other hydrocarbons from hard surfaces such as concrete, asphalt or wood. Effective for individual home use, or industrial applications.

Simply apply Oilbuster by sprinkling on affected area. This hydrocarbon spill response product is a natural, biodegradable and nontoxic mix of ingredients which absorb and remediate oil spills, and can achieve 100% bio-remediation. Note: Oil Buster not guaranteed to remove oil stains or oil from 'old' oil spill stains on garage floors or driveways.
